ATTRACT GUESTS WITH *year-round outdoor dining*

Patios shouldn't be reserved for perfect weather. By implementing heaters and misting systems, you can create an attractive, functional outdoor space that will generate additional revenue. Patrons love the idea of dining al fresco, and with the right system we can create the ideal setting.

PERMANENT *vs.* PORTABLE...THE REAL STORY

Portable heaters are used in many outdoor settings, mainly because they are fairly inexpensive to purchase. However, when you consider the operational costs of LPG (propane), the nuisance of changing tanks, moving and storing the heaters costs can add up quickly. These challenges have turned many proprietors to rental programs, which have a low monthly price but require the propane be purchased through the rental company. Let's examine the real costs of propane as a reason to consider permanent (gas or electric) heaters as a viable alternative. Remember, a heater rental program is a huge expense that happens every year!

Save
UP TO
\$500*

CHART COMPARES (RENTED) PORTABLE HEATERS TO HIGH EFFECIENCY, PERMANENT HEATERS.

UNIT TYPE	#UNITS	TOTAL UNIT COST	ENERGY/ PER UNIT (HOUR)	HOURS/ PER UNIT (WEEKLY)	ENERGY/ ALL UNITS (20 WEEKS)	INSTALL COST (AVG)	TOTAL COST (1 ST YEAR)	TOTAL COST (3-YEAR)
Propane	8	\$120/mo	\$2.50	27	\$10,800	\$0	\$11,400	\$34,200
Electric	8	\$5,720	\$0.88	27	\$3,802	\$7,436	\$16,958	\$24,561
Natural Gas	8	\$9,592	\$0.36	27	\$1,555	\$7,194	\$18,341	\$21,452

Comparison uses a typical Commercial Portable heater to the Tungsten 6000W (electric) and the Tungsten 500 (gas). *Call for details.
